To: Those responsible for the "Randomized Dose Response Study of Dryvax in Children"

In my opinion, putting any children under the age of 12 at even a small risk of suffering from the side effects of vaccination against smallpox is bordering on criminal.

You have literally no real knowledge of whether an attack against people in our country is even possible, let alone even probable.

Even the health professionals who are directly in the front line of vulnerability are hesitant about being immediately vaccinated.

You can be prepared to act swiftly, IF necessary. But please, SLOW DOWN and THINK this through.

Just now, you all sound slightly hysterical.

Most sincerely, C3D
Winifred J. Dimond
